Hello, and thank you for purchasing this quality interpretive product from Inyo Pro™. We have made every effort to make this CD easy to use and the most complete interpretive product available on Grand Canyon National Park. Inyo Pro™ always strives to provide our customers with absolutely the best value possible.

Paul Fretheim, Owner, Inyo Pro™

## Installing The CD on Your Computer

You should copy the CD to a hard drive on your computer and then put the CD away for safe keeping. To do this, you put the CD in your computer's optical (CD/DVD) drive. When the CD appears in "My Computer," right click on the CD and choose "Copy."

Then navigate to the hard drive you wish to put Grand Canyon in Virtual Reality on and right click and choose "Paste."

Then eject the CD and put it in its sleeve and store it for safe keeping.

Or, if you choose, you can just run the program from the CD.

## Getting Started

On the CD you will find a file named "Index." Double-click this file to open it. The Index provides links to nearly every part of Take Home Grand Canyon in Virtual Reality. There is a folder on the CD of single images. You access those like any other photos on your computer.

## Using the maps

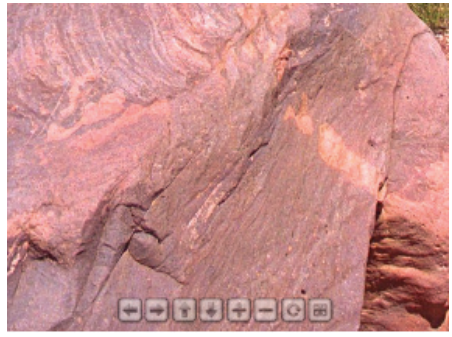
There are two different categories of maps on the Take Home Grand Canyon in Virtual Reality CD - the 1-100 000 series and the 1-24,000 series. You will find nine of the 1-100 000 series maps and 30 of the 1-24 000 series. All can be opened from the first page of the index. To open a specific map, just click on that map in one of the images in the index.

To return to the index from any of the maps, scroll to the bottom of the map and you will see a tiny image of the map index. Click on that button to return to the index.

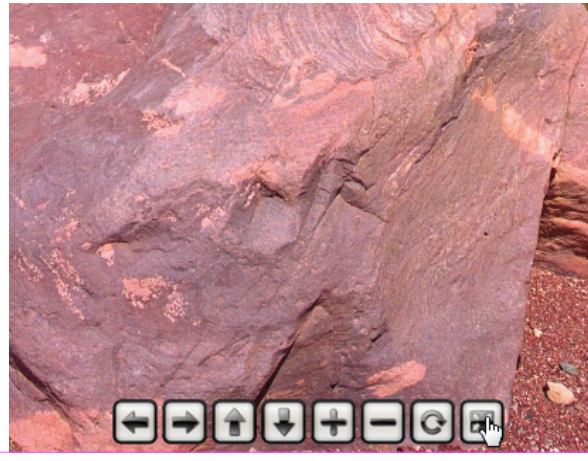
You will also see small cylinders on some of the maps. These cylinders are buttons which will take you to a 360 degree virtual reality image of that location. When you place the cursor with your mouse over one of the tiny cylinders a larger view of that cylinder will appear. Clicking on that larger cylinder will bring up the panoramic view inside your browser. Yes, that's right - the panormas will open in your default browser, such as Firefox or Internet Explorer. To switch between the panoramic images and the maps or index, you switch to Adobe Reader, which is the application that displays the maps and indexes.

## Navigating in the Panoramic Images

If you look closely at the bottom of the image in a panoramic image you will see a tiny, greyed out strip of small buttons.



Then, if you move the cursor over that strip of greyed-out buttons, they become full sized and active.



## Printing Sections of the Topographic Maps

With Reader® 7 the print window gives the option of choosing to print the part of the page that is visible, i.e., the "Current View." With this feature, you can just zoom the map to the part you want to print, then choose print, and in the print window, select "Current View" and "Fit to Printer Margins" as shown.
